“The common principle ... is that those who write, disseminate, and store mathematical literature should act in ways that serve the interests of mathematics, first and foremost.”

INTRODUCTION

- Great changes are underway in the way we compute and communicate. This talk discusses a few of the changes that impinge especially on the mathematical sciences, **concentrating on the initiatives of the IMU**.
- The full [CEIC Report](#) to the General Assembly is available on line in Word and PDF at <http://www.ceic.math.ca/>.
- This is a complicated world, e.g., the Canadian Mathematical Society *adheres* to the IMU within the [International Council of Scientific Unions](#) (ICSU <http://www.icsu.org/>), via the Canadian *National Research Council* (NRC)!
- And as Mathematicians we are growingly powerless to effect our future.

As evidence of the changes, I refer to two recent issues of *Computers in Science and Engineering*, a journal jointly published by the ACM and the IEEE. The first, in February 2000, was on the [Top Ten Algorithms](#) having the

"greatest influence on the development and practice of science and engineering in the 20th century".

See also the Science News coverage at
(www.sciencenews.org/20000212/mathtrek.asp)
entitled 'Algorithms for the Ages'.

- A follow up issue in May 2001 was on *Tomorrows' Hardest Problems*

(<http://computer.org/cise/cs2001/c3toc.htm>).

It includes my article with P. Borwein, discussing

"Challenges in Mathematical Computing."

A *true* preprint---the editor actually edited---is available at

<http://www.cecm.sfu.ca/preprints/2001pp.html>.

- Therein, we make the claim that

"Almost all interesting mathematical algorithmic questions relate to NP-hard questions and such computation is prone to explode exponentially. More space, more speed and processors, and even say massive parallelism will have an impact but it will be largely at a 'micro not macro' level. We anticipate the greatest benefit accruing from mathematical platforms that allow for highly computer assisted insight generation (more 'aha's' per cycle), not from solution of grand challenge problems."

- While I talk primarily from the perspective of a researcher, it is important to remember how many 'players' there are and how small a part of the scheme mathematical [science publishing](#) and computing really is.
- Though we, like Tom Lehrer, know math is [everywhere](#), in reality even the bioscience disciplines are likely to tread over us.

- For example, Nobel Laureate Richard J. Roberts recently wrote in "**PubMed Central: The GenBank of the published literature**", *Proc. Natl. Acad. Sci. USA*, Vol. **98**, 2, 381--382, January 16th 2001.

(<http://www.pnas.org/cgi/content/full/041601398v1>)

"What is a reasonable delay? I would argue that 6 months seems a reasonable time for a journal to monopolize the content. Most of us would not dream of scanning the contents of a journal published 6 months ago unless we were searching for a specific article. Thus it seems unlikely that a large number of subscriptions would be lost if 6-month-old issues were made freely available. I think rather few worthwhile journals would be adversely affected if they were to institute such a policy."

- Such an outcome would *destroy* most current mathematics society publishing. Despite that, *such issues are not high on mathematicians' agendas*. For example, only a handful out of over ten thousand mathematicians have chosen to grant the AMS permission to publish rather than transfer copyright, since they were offered the choice a decade ago.

- Nor do we often take care to distinguish public ventures from purely commercial initiatives like <http://www.mathpreprints.com/> (which actively hides its Elsevier roots).

Neutrality ([Nature](#) Sept 6th 2001)

"But PMC and E-Biosci highlight the urgent need to index the full text of papers and their metadata and not just abstracts, as is the practice of PubMed and other aggregators.

.....

*The reality is that all of those involved in scientific publishing are in a period of intense experimentation, the outcome of which is difficult to predict (see Tim O'Reilly, Information wants to be valuable). **Getting there will require novel forms of collaboration between publishers, databases, digital libraries and other stakeholders. It would be unwise to put all of one's eggs in the basket of any one economic or technological 'solution'. Diversity is the best bet."***

- As Lawrence Lessig cogently points out, innovation and freedom are under digital threat at **content, code and concrete** levels.

I finish this introduction by quoting Lessig quoting [Jefferson](#) on the nature of ideas.

JEFFERSON

“If nature has made any one thing less susceptible than all others of exclusive property, it is the action of the thinking power called an idea, which an individual may exclusively possess as long as he keeps it to himself; but the moment it is divulged, it forces itself into the possession of everyone, and the receiver cannot dispossess himself of it.

[2] Its peculiar character, too, is that no one possesses the less, because every other possesses the whole of it. He who receives an idea from me, receives instruction himself without lessening mine; as he who lites his taper at mine, receives light without darkening me.

[3] That ideas should freely spread from one to another over the globe, for the moral and mutual instruction of man, and improvement of his condition, seems to have been peculiarly and benevolently designed by nature, when she made them, like fire, expansible over all space, without lessening their density at any point, and like the air in which we breathe, move, and have our physical being, incapable of confinement, or exclusive appropriation.

[4] Inventions then cannot, in nature, be a subject of property. ’’

- Letter from Thomas Jefferson to Issac McPherson (August 13, 1813), in *The Writings of Thomas Jefferson* 6, page 94 of *The Future of Ideas* by Lawrence Lessig, Random House, 2001.

THE WORK OF THE CEIC (1998-2003)

- To further set the stage:

*“The work then proceeds in a manner unique to science. Because practitioners publish their work electronically, through the e-print archives at the Los Alamos National Laboratory in New Mexico, the entire community can read a paper hours after its authors finish typing the last footnote. **As a result, no one theorist or even a collaboration does definitive work. Instead, the field progresses like a jazz performance: A few theorists develop a theme, which others quickly take up and elaborate. By the time it's fully developed, a few dozen physicists, working anywhere from Princeton to Bombay to the beaches of Santa Barbara, may have played important parts.**”*

- Gary Taubes in “String Theorists Find a Rosetta Stone” *Science*, July 23 (1999), 513.
- I draw attention to various specific CEIC activities:

a. Our [statement on copyright](#) and related [copyright activities](#); and more generally on current and future [Best Practices](#);

b. Our plans for development of [personal collected works](#) and;

c. Our attempts at propagating *secondary home-pages*---such as CECM's at:

www.cecm.sfu.ca/althome.html

and my own *personal home page*

www.cecm.sfu.ca/Math-Net/persons_meta/jborwein.html)

See also the *Installation Interface*:

<http://elib.zib.de/cgi-bin/mpm.cgi>

and a list of current [Math-Net sites](#).

d. I also note the growing attempts to collect mathematical data in learning object repositories and in "global data-bases" such as *arXiv*:

<http://front.math.ucdavis.edu/>.

e. The arXiv has grown out of the Los Alamos preprint server, which has now moved to Cornell

www.nature.com/nature/debates/e-access/Articles/ginsparg.html

and so should mesh better with the various **World** and **Digital Library Initiative(s)**, Euclid, and like projects.

- I especially note CEIC's own involvement with:

1. *MPRESS*: <http://MathNet.preprints.org/>
through international extension of the German *Math-Net*: <http://www.Math-Net.org/>

2. *Persona Mathematica*: www.mi.uni-koeln.de/Math-Net/persona_mathematica/

3. Other services still to be set up, in accord with the *MathNet Charter*: www.math-net.org/Math-Net_Charter.html

4. Two new initiatives are the World [Digital Math Library](http://www.wdml.org) (www.wdml.org) and the WDM-online.
- These, and like topics, will be covered by other speakers today. Many were described in some detail in Swanzl and Sperber's contribution to the 2001 Linz meeting: *MathNet: Semantics, Visualization and Internalization*.
-
- I conclude by discussing our hopes to further develop tools for coordinating these efforts---and the issues and obstacles involved.

For example, in our mandate we were asked to "consider transferring the World Directory of Mathematicians to an electronic freely accessible form".

*For logistic and IP reasons, we had recommended not doing so in 2002 but have now opted for **FEDERATED SEARCHING** ('moving the bar up').*

- More generally, we see our future as less technological and more advisory: providing a clearing house and an advisory role on these and similar complicated issues.

*Our **Best Practice** and **Copyright** documents are already serving as models for other disciplines, and are frequently googled.*

- In each case the active endorsement of the IMU Executive has proven invaluable and that of ICIAM and ICME is invited.

A CALL TO ARMS

- The period in which we as academics might ensure control of any significant part of this rapidly changing environment is rapidly slipping away.
- One idea is to actively organize to return copyright to its status at the time of the original **Act of Anne** (1709) allowing fourteen years renewable once.

- Despite the obstacles, the rewards can be amazing:

“Three years ago, said Dr. Zanelli in Chile, one of his own students posted a paper and the next day received an e-mail message from Dr. Witten. The student was at first so shocked that he accused Dr. Zanelli of playing an elaborate practical joke.

We learned that great physicists do read the archives daily and they browse through all the preprints,’ Dr. Zanelli said, ‘even if they come from an obscure place in the end of the world.’

Dr. Witten’s instant response, Dr. Zanelli said, ‘was like having the pope drop by for tea.’ ”

- James Glanz, “Web Archive Opens a New Realm of Research,” *New York Times*, April 30, 2001.

AND IT IS ANYONE'S GUESS AS TO WHERE WE

ARE GOING

OR WHO

INDEED 'WE' ARE.

International Mathematical Union
endorses 'Best Practices' in Electronic
Scholarly Publishing

Friday, May 10 2002 @ 10:31 AM PDT

Views: 338

May 10, 2002: The Executive of the International Mathematical Union has endorsed a broad ranging set of recommendations on **Electronic Information Communication**.

These recommendations, written by its Committee on Electronic Information and Communication (CEIC, www.ceic.math.ca), suggest ways in which mathematicians, librarians, and publishers can help shape the future of scholarly communication. The common principle used to formulate recommendations is that those who write, disseminate, and store mathematical literature should act in ways that serve the interests of mathematics, first and foremost.

Recommendations on Electronic
Information Communication (2002)

Friday, April 19 2002 @ 12:21 PM PDT

Views: 140

Communication of mathematical research and scholarship is undergoing profound change as new technology creates new ways to disseminate and access the literature. More than technology is changing, however; the culture and practices of those who create, disseminate, and archive the mathematical literature are changing as well. For the sake of present and future mathematicians, we should shape those changes to make them suit the needs of the discipline.

For this reason, we have identified a number of "best practices" for those involved with the mathematical literature—mathematicians, librarians, and publishers. Many of these are practices that apply to other academic disciplines as well. Although we focus primarily on mathematics, we recognize that we can learn from each other as we move forward, and that no single discipline should act in isolation.

Our advice is meant to guide practice as it changes rather than to set forth a collection of firm rules and admonitions. The recommendations concern all forms of scholarly publishing and do not promote any particular form. Indeed, the authors of this document hold many differing views on the future of scholarly publishing. The common principle used to formulate our recommendations is that those who write, disseminate, and store mathematical literature should act in ways that serve the inter-ests of mathematics, first and foremost.

This is advice that is meant to ease the transition in scholarly communication for present mathematicians. Most importantly, however, it is advice aimed at protecting mathematicians in the future.

Copyright und elektronisches Publizieren: Auf dem Weg zu vernünftigen Regelungen?

Thursday, August 16 2001 @ 10:33 PM PDT

Views: 60

Das Committee on Electronic Information and Communication (CEIC) der International Mathematical Union (IMU) hat die Aufgabe, sich über die langfristige Informationsversorgung in der Mathematik Gedanken zu machen und Lösungsvorschläge hierfür zu erarbeiten. Das Kernthema ist natürlich "Elektronisches Publizieren". Dazu gehören auch Copyright-Regelungen. Mit diesem Artikel beginnt eine kleine Serie von Aufsätzen, in denen ich (in meiner Funktion als eines von elf CEIC-Mitgliedern) die Empfehlungen des CEIC erläutern werde. .

What do you want from your publisher?

Executive summary for authors of research papers in journals

Endorsed by the Executive Committee of the IMU in its 68th's session in Princeton, NJ, May 14-15, 2001)

The number of mathematical papers that are stored or circulated as electronic files is increasing steadily. It is important that copyright agreements should keep in step with this development, and not inhibit mathematical authors or their publishers from making best use of the electronic medium together with more traditional media. While most mathematicians have no desire to learn the subtleties of copyright law, there are some general principles that they should keep in mind when discussing copyright for research papers with their publishers.

1. A copyright agreement with your publisher is a bargain struck between his interests and yours. You are entitled to look out for your interests. Most journal publishers have a standard copyright form, and may be unwilling to vary it for individual authors. But nothing prevents you from asking, if you see room for improvement. Pressure from authors may lead publishers to change their standard contracts.
2. Three groups of people have an interest in your paper:
 - a. Yourself and your employer (who may in some countries be automatically the original copyright holder and hence a party to the copyright agreement);
 - b. The journal publisher;
 - c. Users of paper who are not parties to the copyright agreement, including readers and libraries.

One of the main purposes of your copyright agreement is to control how your publisher or you make the paper available to this third group. Publishers will hardly allow individual authors to dictate agreements with libraries. But if you know that a certain journal publisher makes life hard for libraries, you can take this into account when choosing where to submit your paper.

3. There is no ideal copyright agreement for all situations. But in general your agreement should contain the following features:
 - a. You allow your publisher to publish the paper, including all required attachments if it is an electronic papers.
 - b. You give your publisher rights to authorize other people or institutions to copy your paper under reasonable conditions, and to abstract and archive your paper.
 - c. Your publisher allows you to make reprints of the paper electronically available in a form that makes it clear where the paper is published.
 - d. You promise your publisher that you have taken all reasonable steps to ensure that your paper contains nothing that is libellous or infringes copyright.
 - e. Your publisher will authorize reprinting of your paper in collections and will take all reasonable steps to inform you when he does this.

4. Should you grant full copyright to the publisher? In some jurisdictions it is impossible to transfer full copyright from author to publisher; instead the author gives the publisher an exclusive right to do the things that publishers need to do, and these things need to be spelt out in the agreement. This way of proceeding is possible in all jurisdictions, and it has the merit of being clear and honest about what is allowed or required.

The complete copyright checklist was written by Wilfrid Hodges. It was approved and is recommended by the Committee on Electronic Information and Communication of the International Mathematical Union (IMU). A final version will be posted in the near future.

By JOHN MARKOFF

"PALO ALTO, Calif., May 10 -- Putting the world's most advanced scholarly and scientific knowledge on the Internet has been a long-held ambition for Michael Keller, head librarian at Stanford University. But achieving this goal means digitizing the texts of millions of books, journals and magazines -- a slow process that involves turning each page, flattening it and scanning the words into a computer database."

THE MATHEMATICS SURVEY

Wednesday, December 18 2002 @ 03:07 PM PST

Views: 47

"This is a proposal to construct a new means of organizing, communicating and archiving mathematical knowledge, by a faithful representation of that knowledge in cyberspace. The purpose is first of all to provide a peer-reviewed survey of all of mathematics, professionally organized, fully searchable, navigable and retrievable, continuously archived and updated, and available free online to anyone with Internet access, in perpetuity. This is to be achieved by creation of an electronic journal, The Mathematics Survey (or MathSurvey for short), which would be a multi-layered network of richly interlinked electronic survey journals, one in each branch of mathematics."

Biologists to Launch Free Journal

Tuesday, December 17 2002 @ 10:47 AM PST

Views: 128

With a \$9 million, 5-year grant from the Gordon and Betty Moore Foundation, Nobel laureate Harold Varmus and other biologists are setting out to publish an "open-access" biology journal. Their aim is nothing less than to "create a new economic model in scientific publishing"--a low-cost operation that will not charge for articles but would pay its way with authors' fees (estimated at \$1500 per article initially).

Special funding initiative:

"The John D. and Catherine T. MacArthur Foundation announces a funding initiative focusing on intellectual property and the long-term protection of the public domain. Through this limited initiative of the General Program, the Foundation seeks to contribute to an intellectual property regime in the digital era that balances the legitimate needs of both creators and the public. The Foundation will also support work designed to protect — over the long term — the public domain of information and ideas."

FIGARO - European Academic Digital Publishing Initiative Underway

You can also click the appropriate link below to access a translated version of this press release in:

French, German, Swedish, Polish, Dutch and Italian at:

<http://www.figaro-europe.net/index2.html?news.html>

Utrecht, the Netherlands -- A collective of European universities and publishers today announced the establishment of FIGARO, an academic publishing project that will create a European network of institutions providing e-publishing support to the European academic community. FIGARO will investigate new business models for scholarly publishing and will stimulate open access to the publications produced and distributed with its infrastructure, making scholarly publishing faster, cheaper and simpler.
